

Rs.15500 divided into three parts proportional to $\frac{1}{2} : \frac{1}{3} : \frac{1}{5}$ are respectively?

The monthly income of A and B is Rs.6000 and Rs.8000 respectively. If their expenses are 70% and 80% respectively, find the ratio of the savings of both?

A sum of money is distributed among A, B & C such that B gets 12.5% more than A, But 25% more than C. If A & C is Rs.5700. Find the difference of A & C.

A person distributes Rs.330000 to his daughter, wife and son in such a way that $\frac{1}{2}$ part of the daughter is $\frac{1}{4}$ part of the wife and $\frac{1}{5}$ part of the son is equal. How much is the daughter's

The ratio of monthly incomes of Ram and shyam is 9:8 and their monthly expenditures are in the ratio 7:6. If each of them saves Rs. 8000 per month, find the sum of their monthly incomes.

6 years ago, the ratio between the age of B's mother and B's age was 7: 3. 8 years hence, the ratio between their ages will be 7: 4. Find the present age of B.

The ratio of milk to water is 5:3. If 68 litres of water is added, the ratio becomes 7:11, then find the new amount of water in the mixture.

Rs.5200 was to be divided among A, B and C in the ratio of $\frac{1}{3} : \frac{1}{4} : \frac{1}{2}$, but by mistake it was divided in the ratio 7:4:15. The amount in excess received by C was.

The ratio of expenses and savings of a person is 26: 3. If your monthly income is Rs.14500 then what is his monthly savings?

A money is divided into A, B and C in the ratio of 3: 5: 7. If C's share is Rs.1600 more than A's share then what is B's share?

A sum of money is distributed among A,B and C such that B gets 10% less than A, but 20% less than C and D gets $33\frac{1}{3}\%$ more than C. Then find D is that percent more than A.

Two numbers are in ratio of 7:13. When 24 is added in each number then ratio becomes 11:17. Find difference between both initial numbers.

The ratio of monthly incomes of Ram and shyam is 9:8 and their monthly expenditures are in the ratio 7:6. If each of them saves Rs. 8000 per month, find the sum of their monthly incomes.

The ratio of milk to water is 7:9. If 27 litres of water is added, the ratio becomes 7:12, then find the amount of milk in the mixture.

The respective ratio between the A's age after 3 years and B's age 3 years ago is 10: 9 and the respective ratio between the A's age 3 years ago and B's age after 3 years is 17: 21. What is A's present age ?

A sum of money was to be divided among A, B & C in the ratio of $\frac{1}{4} : \frac{1}{6} : \frac{1}{3}$, but by mistake it was divided in the ratio 7:8:12. If B received Rs.200 excess then find what money was distributed among A, B and C.

The income ratio of A, B & C is 4:5:7 and expenditure ratio is 5:4:6 respectively. If "A" saves 25% of his income but C save Rs.6800. Then find the saving of B.

The expenditure ratio of A:B:C is 4:9:5. If A, B & C save 20%, 25% and 16.66% of their income respectively. If the total income of A, B & C together is Rs.4600. Find the income difference of B and C.

3rd division is 5:6:7 respectively. After recheck the copy, 200 students promoted from 3rd division to 1st and 2nd division and now ratio becomes 4:5:3 respectively. Then find the total number of students in the class?

In a 200 gram alloy, the ratio of copper and zinc is 2: 3, how much copper is added to it and the ratio of copper and zinc in the new alloy is 3: 2?

A and B are two alloys of gold and copper in the ratio 7:2 and 7:11 respectively. If equal quantities of these two alloys are melted to form new alloy C, then the ratio of gold and copper in C is?

Two mixture A and B contain 80 liter and 60 liter mixture of milk and water in ratio 5:3 and 7:5 respectively. If both mixture are poured in new vessel C. Then what will be ratio between milk and water in new vessel?

Acid and water are mixed in a vessel A in the ratio of 5:2 and in the vessel B in the ratio 8:5. In what proportion should quantities be taken out from the two vessels so as to form a mixture in which the acid and water will be in the ratio of 9:4?

Three containers A, B and C are having mixtures of milk and water in the ratio of 1:5, 3:5 and 5:7, respectively. If the capacities of the containers are in the ratio 5:4:5, find the ratio of milk and water, if the mixtures of all the three containers are mixed together.

There are 2 vessels A & B containing 25 liters each of pure milk and pure water respectively. 5 liters of milk from A is taken and poured into B, then 6 liters of mixture from B is taken and poured in A. What is ratio of water A and B respectively.

A can contains a mixture of two liquids A and B in the ratio 7:5. When 9 liters of mixture are drained off and the can is filled with B, the ratio of A and B become 7:9. How many liters of liquid A was contained by the can initially?

A jar contains 120 liter pure alcohol. From this 24 liter of alcohol is taken out and replaced with water. This process was repeated once more. Find the final amount of alcohol in the mixture.

The price of a piece of diamond varies according to square of its weight. When he breaks the diamond into four pieces of different weights in the ratio 2 : 3 : 4 : 5, he incurs a loss of Rs.28400. Calculate price of original piece of diamond.

The price of a book varies directly as the no. of pages in it and inversely as the time periods in years that have elapsed since the date of purchasing. Two books cost the same, however, the no. of pages in the first book is triple of the second book if the first book is sold on 18 years ago, how long ago was the second book sold?

Fresh fruit contain 80% water and dry fruit contains 15% water. How many kg's dry fruits can be obtained out of 255 kg fresh fruits?

The ratio of students in a coaching preparing for B.Tech. and MBA is 4 : 5. The ratio of fees collected from each of B.Tech. and MBA students is 25 : 16. If the total amount collected from all the students is 1.62 lakh, what is the total amount collected from only MBA aspirants?

A bag contains a certain number of coins of Rs 1, 50 paise and 25 paise in ratio 7:8: 4. If there is Rs. 360 in the bag then calculate number of coins of 25 paise.

One year ago the ratio between A's and B's salary was 3: 4. The ratios of their individual salaries between last year's and this year's salaries are 4 : 5 and 2:3 respectively. At present the total of their salary is Rs.4160. The salary of A now is?

Arvind Singh purchased a 40 seater bus. He started his services on route number 2 (from Terhipuliya to Charbagh with route length of 50 km). His profit (P) from the bus depends upon the number of passengers over a certain minimum number of passengers 'n' and upon the distance travelled by bus. His profit is Rs.3600 with 29 passengers in the bus for a journey of 36 km and Rs.6300 with 36 passengers in the bus for a journey of 42 km. What is the minimum number of passengers are required so that he will not suffer any loss?

In an office of 1200 employees, the ratio of urban to rural members of staff is 8: 7. After joining of some new employees, out of which 20 are rural, the ratio becomes 5: 4. The number of new urban employees is

Swami brought pulses of worth Rs.32/kg and Rs.45/kg. He mixed them with a third variety in the ratio 1: 1: 2. If the mixture is worth Rs.88/kg, then the price of the third variety per kg will be:

A box contains 280 coins of Rs 1, 50 paise and 25 paise. The value of each kind of coin are in the ratio of 8: 4:3. Then calculate number of coins of 50 paise.

If the ratio of incomes of A and B in 2001 is 2 : 3 and the ratio of incomes of A in 2001 and 2002 is 4:5. Find the expenditure of A in 2002, if saving in the same year is Rs. 4000. It is given that in 2001 the sum of income of A and B is Rs. 25000.

Four friends A,B,C and D have some money among them one day they decided to equate the money, so first A gave B what B had initially, then B gave C what C had initially , Again C gave D what D had initially and finally D doubled the money of A. Thus each of them had equal sum of Rs. 48.

Two vessels P and Q contain 'a' litres of petrol and 'b' litres of kerosene respectively. 'c' litres of petrol and quantity of Kerosene is taken out and then transferred to Q and P respectively. This process is repeated several times. If after the first operation the concentration of petrol and kerosene does not change then what is the value of 'c'?

In ABC Corporation there are some management trainees. These trainees are divided into 3 groups A,B and C for 3 different projects in the ratio of 3:4:5 respectively, where P,Q,R are the projects-in charge of A,B,C respectively. The difference between the no. of trainees in A and C is not greater than 3. Also P,Q,R belongs to the group of trainees, the no. of assistant of Q is what % less than the no. of assistant of R?

Three persons A, B and C agree to pay their hotel bills in the ratio of 3:4:5. A pays the first day's bill which amounts to Rs. 26.65, B pays the second days bill which amounts to Rs. 42.75 and C pays the third day's bill which amounts to Rs. 53. When they settle their accounts, which of the following happens?

At sahara shopping centre, a person can purchase as much articles at a time as his or her age that is a person of 'n' year's age can purchase only n similar articles at a time. Amisha is younger to her elder brother who has just entered into his twenties. One day Amisha went to the Sahara Shopping centre, she purchased same toffees at a particular rate on the ground floor. But when she reached on third floor she found that she could purchase double the no. of toffees with the same amount as she had spent on the ground floor. Also to purchase the same no. of toffees on the third floor she had to spend Rs. 2 less than that of on the first floor. How many toffees did she buy?

Three friends A, B and C decided to share the soda water with D, who had no soda water. A contributed 2 tumbler more than that of B and B contributed 1 tumbler more than that of C and then all of them had equal amount of soda water. In turn D paid money, which was divided among A,B and C in the ratio of their contribution to D. Thus A had gotten thrice as much money as B had gotten. The price of each tumbler of soda water was RS. 15 and each transaction was integral in numbers either the sharing of money or contribution of soda water. What was the sum of money that B had got?
